**COTTONIZED
LINEN FIBER**

www.linenmill.by

- Cottonization is one of the most modern and promising ways of processing short flax fiber. The launch of Temafa (Germany), Rieter (Switzerland) and Laroche (France) cottonization lines made it possible to start producing cottonized linen fiber, which is widely used as a raw material in various industries, for example in blended yarns and non-woven materials production. The cottonization chain is fully automated and consists of a modular system of opening and cleaning stages in which fibers are gradually cleaned, separated and shortened. Cottonized linen fiber has purity similar to cotton fiber. ●

www.linenmill.by

TYPES OF COTTONIZED LINEN FIBER

Co III bleached

Already bleached fiber makes it possible to be used in further production, thereby reducing its cost.

Co III natural

Co III boiled

The process of boiling destroys pectin substances to obtain elementary fibers of very low linear density, which brings the properties of cottonized linen fiber closer to cotton fiber.

PHYSICAL-MECHANICAL SPECIFICATION OF COTTONIZED LINEN FIBER

Type of fiber	Composition	Linear density, not more than, tex	Mass fraction of sheaves and trash, not more than, %	Mass fraction of fibers of length up to 15 mm, not more than, %	Mass fraction of fibers of length over 40 mm, not more than, %	Average fiber length, mm	Weight of one bale, kg
Bleached Co	100 % flax	1,50	1,0	20,0	65,0	35,0	350
Boiled Co	100 % flax	1,50	1,0	20,0	65,0	35,0	350
Natural Co	100 % flax	1,95	2,5	15,0	75,5	40,0	200

Fiber is packed in bales, each bale is tied with metallic sliver and marked with an information sticker. The shipment is carried out at export prices on FCA Orsha terms. Customs code of cottonized linen fiber is 5301290000.
